

## High Definition Cine Super E Zooms

Designed specifically to complement Fujinon's range of Cine Super E Primes when it comes to Digital Cinematography zooms, Fujinon has created a range of four different HD Cine Super E Zoom lenses. These new HD Cine Super E Zoom lenses deliver crisp, sharp and virtually distortion-free images with the high resolution demanded in the industry.

With their large barrel size, large focus rotation of 280 degrees and highest optical quality, the HD Cine Super E Zooms offer both variety and flexibility to film-makers taking advantage of the benefits of shooting digital cinema productions for the big screen.

All lenses in this series feature clear markings for zoom, focus and iris. They feature a standard cine-compatible 0.8 module for interfacing with all existing cine-rigs and Matte Box assemblies. Since the gear position is identical among all zoom lenses, time-consuming adjustment of the rigs is not necessary when changing lenses.

Select your favourite Cine Super E Zoom lenses: HAe3x5, HAe5x6, HAe10x10 and HAe12x9.5 to accommodate virtually any situation when shooting a movie. Make the ideal choice for your digital movie-making.
